Environmental Economics - Definition:

Environmental Economics is a special branch of Economics which is related with the explanation about the relationship between the economic activities and environment. Environmental Economics is concerned with the explanation of the importance of environment for economy, the impact of economy on the environment and the measures to control the economic activities which have negative impact on the environment.

According to Scoot J. Callan and Janet M. Thomas, “Environmental Economics is concerned with identifying and solving the problem of environmental damages or pollution, associated with the flow of residuals”.

According to C.D. Kolstad, “Environmental Economics is concerned with the impact of the economy and the appropriate way of regulating economic activity so that balance is achieved among environmental, economic and other social goods”.

Therefore, Environmental Economics is related with the analysis about the inter relationship between economy and environment, the importance of environment for the economy, the impact of economic activities on the environment as well as the measures to control those economic activities which create environmental pollution.
